Personal Video: Face time is back

“We are going to see video become an expected part of the work environment, much the way email is today...it will become an accepted way of doing business.”

ANDREW DAVIS, WAINHOUSE RESEARCH

VIDEO COMMUNICATIONS: TO THE DESKTOP AND BEYOND

As technology continues to transform the way business is done in today's global market, there are some fundamentals that remain the same: face-to-face is still the preferred way to build relationships. Personal video takes video out of the boardroom and puts it on the desktop, making visually connecting with customers, partners and colleagues accessible to everyone. Decisions can be made faster, expertise can be shared instantly and organizations can experience a greater sense of unity. The days of interpreting emails, scheduling meetings in over-booked rooms and impersonal business communications are over. TANDBERG is bringing face time back to everyday communication.

The suite of personal video communication products from TANDBERG is designed to provide simple high-quality audio and video that is available to everyone. As video becomes ubiquitous throughout the organization, it becomes an integral component of an efficient, unified communications strategy. Products like the TANDBERG E20 Video IP Phone, Movi™ PC video and the PrecisionHD™ USB Camera help bring video communications to the individual and make it accessible anywhere.

TANDBERG E20: TRANSFORM THE DESKTOP, TRANSFORM YOUR BUSINESS

The TANDBERG E20 integrates with your IP network to enable a completely new experience at the workspace, merging voice, video and collaboration into one device. Every business call can now be an opportunity for face time. The combination of IP calling features like call forwarding and call transfer and team directories at your fingertips with the 10.6" screen, DVD-quality resolution, ultra-wideband speakers and acoustic echo cancellation provides an unparalleled user experience. With the benefit of interpreting body

language and facial expressions, the E20 will help accelerate the decision-making process, improve communications and unify the organization. And, because the E20 can be managed using the TANDBERG Management System and the Video Communications Server, deployment and management is simple.

MOVI: YOUR OFFICE JUST GOT BIGGER

TANDBERG Movi is a next generation video collaboration tool that turns any PC into a mobile, high-definition video conferencing system. Imagine taking a business meeting from a cafe, an airport gate or even a park bench. Regardless of where you are, you can always collaborate face to face, without physically having to be in an office. As part of a complete video communications strategy, Movi provides the flexibility to visually connect when you're on the go. Like all TANDBERG products, Movi is standards based, so it integrates seamlessly with desktop devices, video conference rooms and even telepresence, so everyone can be an integral part of any meeting, regardless of where they are physically located.
